

Please ensure these instructions are read thoroughly before commencing connection of a mobile device to your Evolve system.

CONNECTING MOBILE DEVICES

1. From your mobile device (tablet, smartphone, laptop, etc.), connect to the evolve network

- Go to your device settings/network settings, and select Wi-Fi settings
- Select and connect to **evolve**
- Password: **smartvent**

2. On your mobile device, open a web browser (such as Chrome, Explorer, etc.)

- In the URL bar type in one of the following web addresses based on the SmartVent system you have:
Positive Pressure Evolve: **192.168.1.170/index.htm**
Synergy Evolve: **192.168.1.170/text.htm**
- Press go/enter to load the SmartVent page

3. Save the SmartVent page

- Once the SmartVent page has loaded, bookmark the page or save it as the homepage

Notes:

- The evolve network is a LAN (Local Area Network), and once connected to evolve you will have no internet connection.
- After connecting to the evolve network, you should not be connected to your home network unless you are bypassing the evolve router.
- Once you exit the SmartVent settings page and/or disconnect from the evolve network, the system will retain the settings you have applied, and the system will continue to operate based on these settings.
- Please note that the evolve app is no longer supported, so please uninstall the app, and access the SmartVent system as per step 2 above .
- For Apple iOS devices (iPhone, iPad), there is a separate user guide available upon request.
- If you are experiencing a Time-out error, then move closer to where the evolve router is located. Also, clear your device cache and browser history, and/or try a different device.
